

Eco Friendly Packaging

Eco-Friendly Packaging: Sustainable Solutions for a Greener Future

At Sierra Coating Technologies, we have spent years testing and qualifying eco-friendly packaging solutions that minimize environmental impact while maintaining high performance. With the growing demand for sustainable packaging, we offer a range of innovative coatings and paper combinations materials that help companies reach their sustainability goals.

Sustainable Packaging Materials – We are committed to helping commercialize recyclable, compostable, or biodegradable materials. By offering sustainable alternatives to traditional plastics and non-recyclable packaging solutions, our eco-friendly coatings are chosen to protect products while minimizing environmental concerns.

Reducing Plastic in Packaging – Our focus is on developing poly replacements—materials that replace conventional plastics like polyethylene and PVC in packaging. These solutions match the functionality of plastics while improving recyclability and reducing waste in landfills.

Customized Eco-Friendly Solutions – From moisture, grease and oil-resistant barriers to FDA-compliant coatings for food packaging, Sierra Coating offers a range of made to order solutions that help brands meet sustainability standards. We work with you to design packaging that not only protects your products but also supports your brand's environmental goals.
