

Roll Weight and Area Conversion Calculators

Quickly calculate your order volume

The screenshot shows a web interface for unit-converting-calculators. It features a header with the Sierra Coating Technologies logo and a sub-header 'Enter your converting requirements into the white cells'. Below this are several conversion tables with red headers and white data cells. The first table is for 'Paper Type' with columns for Length, Width, Tag # per Roll, Convert To, Basis Weight to Convert, and TSG or 3000 sq. ft. basis weight. The second table is for 'From Roll Weight to' with columns for Roll Weight, Basis Wt. of Roll (lb. ft.), Roll Width, and Approx. length of Roll in Feet. The third table is for 'From Caliper' with columns for Caliper or Thickness in mils, Roll Diameter outside (in), Core Diameter outside (in), and Approx. length of Roll in Feet. The fourth table is for 'From Roll Size to' with columns for Roll Weight, Roll Diameter inside (in), Roll Width, Core Diameter outside (in), and Approx. Roll Weight in LBS. A 'Note' section at the bottom provides instructions: 'All Red is for data entry', 'Only change Roll', 'All Black is for calculations', 'Do not Change', 'All Blue Formulas cannot be used', and 'Do not Change'.

As a project manager or buyer, it's important to order the right volume of product. In the paper and film business it is common to talk about number of rolls or weight of rolls. This needs to be translated into feet or have feet translated into rolls or pounds of product.

Sierra Coating created these conversion tools to assist in these frequent calculations of film and paper to help you determine how much to buy or what you will receive in your order. And when you're ready to buy, we can help with that too.
